

IBEXCATALOG

Security Services

Cyber attacks are a constant threat to your business. Whether it means network shutdown, breach of confidential information and communications, or even shuttering you for good, the consequences of these attacks can be catastrophic. By instituting air-tight security protocols, personalized around your business needs, Ibexlabs assures the security of your system now and into the future.

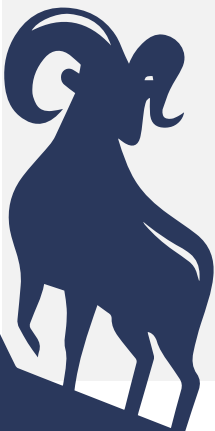

Unsecure System

- Vulnerable to DDOS attacks that can shutdown the network
- Unfettered access to confidential information
- Monitored manually by an IT manager
- Must be manually optimized to current threats
- No backups in case of system failure

Ibexlabs Solution

- Advanced DDOS protection
- Differing tiers of access, so only authorized users have access to confidential information.
- Data integrity protocols, so that your data is never corrupted.
- 24/7 security monitoring and data accessibility, even remotely.
- Centralized monitoring dashboard with automated optimization
- Firewalls, VPCs and automated backups of every machine on the network
- Ibexlabs custom config rules help customers perform configuration drift, providing the capability to recover from environment misconfiguration and assure continuous compliance

Benefits

Confidentiality

- Keeping data accessible only to those who should have access to it.
- Flexible role/permission system allows for different tiers of access

Integrity

- Data remains consistently accurate and available, eliminating the threat of corruption and loss.
- Automated Backups assure that your data will not be lost

Availability

- 24/7 secure access to your data from anywhere allow authorized users to make agile decisions to respond to challenges

Flexibility

- Personalized security system built around the particular needs of your business
- Centralized management interface allows for powerful birds-eye view

AWS Security Hub & AWS Firewall Manager

- Firewalls, endpoint protection and powerful system scanners are just a few of the many security tools at your disposal.
- Assure the highest security and achieve regulatory compliance with PCI and CIS.

Well-Architected AWS Infrastructure

- Automated resource balancing, hosting over several availability zones, and automated updates and optimization that scales with your business needs.

When can we get started?

Full implementation of your security platform takes about four to six weeks. During that time, Ibexlabs will help host or migrate your application with minimal user impact.

Ibexlabs has helped many customers over the years with cloud hosting and modernization and achieved multiple AWS competencies such as DevOps, Healthcare, MSP and is part of AWS Well Architected Partner program. We believe in customer obsession, transparency and [our reviews](#) speak to the results we helped deliver to our customers over the years.
