Ibexlabs Enterprise Accelerator

Security and accessibility are high priorities when it comes to your business data, and many businesses opt for on-premise data hosting for precisely these reasons. Running a server yourself can quickly balloon your budget, and take precious time from other important matters. At Ibexlabs, we take your priorities seriously and utilize a private cloud hosting infrastructure built around your code, and your way of doing business.

Governance and compliance become exponentially harder when running applications for multiple teams. Ibexlabs enterprise accelerator helps by providing base line account configuration with guardrails, enabling teams to self service cloud based infrastructure.

The accelerator also comes packed with Ibexlabs services such as application hosting, microservices, and kubernetes deployment patterns which provide secure and automated hosting environments.

> **" I was looking for a strategic partner to help me create and implement a very robust, HIPAA compliant, and secure AWS infrastructure. I've been very impressed with the entire Ibexlabs team and highly recommend others to work with them.**

- Tim Heger

HEALTHBRIDGE FINANCIAL CTO/CISO

Build your own

- Accessible at any time

  The security of hosting data locally

- High costs of servers and IT infrastructure

- Difficulty scaling up as data needs grow

- Manual set up with reduced team velocity and increased cost.

Ibexlabs Enterprise accelerator

- Battle tested cloud based deployment patterns.

- Security and compliance at scale.

- Self service with guardrails.

- Eliminate the costs of an in-house server and IT.

- Achieve governance and regulatory compliance

Benefits

Work the Way You Want

- Hub and spoke multi account / VPC structure with share controls.
- Seamlessly connect to existing cloud and/or on-premise data infrastructure.

Detailed Management Capabilities

- Central Auditing, Configuration Management, and Compliance with AWS Cloudtrail, Config, and SecurityHub with KMS Encryption

Cost-Saving Automation

- Eliminate the need for on-premise servers and IT.

Enterprise Accelerators

- Leverage a wide array of standardized AWS Service Catalog products with Application, Microservices, Data & Analytics, Network accelerators.
- Create any AWS resource incorporating industry best practices with minimal effort.

Always Run At your Best

- Well Architected Infrastructure with industry best practices that automatically handles the details of capacity provisioning, load balancing, scaling, and application health monitoring.

Peace of Mind

- AWS Security Tools assure 24/7 protection against cyber attacks.
- Ibexlabs has the proven track record to create a system that is compliant with regulatory requirements.

AWS Control Tower

- Set up and govern a new, secure, multi-account AWS environment based on best practices established through our extensive enterprise experience.
- Centrally create and manage portfolios, products, portfolio access grants, and other operational aspects of the Hub-and-Spoke model.
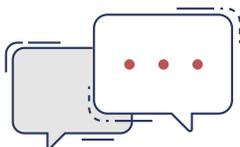

When can we get started?

Full implementation of your application hosting platform takes about four to six weeks. During that time, Ibexlabs will help host or migrate your application with minimal user impact.

Ibexlabs has helped many customers over the years with cloud hosting and modernization and achieved multiple AWS competencies such as DevOps, Healthcare, MSP and is part of AWS Well Architected Partner program. We believe in customer obsession, transparency and **our reviews** speak to the results we helped deliver to our customers over the years.
