AWS Service Catalog

Whether in the beginning stages of cloud development or further along, managing your data infrastructure takes considerable time, effort and funds. While manageable at first, these systems can grow unmanageable as your business grows. As Managed Service Providers (MSP), Ibexlabs has the accreditation and proven track record to manage every aspect of your cloud infrastructure, from launch to optimization and every stage in between.

“ I was looking for a strategic partner to help me create and implement a very robust, HIPAA compliant, and secure AWS infrastructure. I've been very impressed with the entire Ibexlabs team and highly recommend others to work with them.

- Tim Heger

HEALTHBRIDGE FINANCIAL CTO/CISO

Managing Your Own Data

- Accessibility and direct management
- A system you're familiar with
- IT and server costs
- Difficulty addressing issues when they arise
- Manually make changes

Ibexlabs Managed Services

- Built around your existing system
- Centralized management interface
- 24/7 support
- Automated optimization and updates
- Only pay for the infrastructure you need

Benefits

Watchdog Security

24/7 automated monitoring and support means that your system is always on the lookout for potential threats, and can respond to them quickly.

Eliminate Downtime

Resource balancing and several Availability Zones assure that your system never falters under heavy traffic.

Cost-saving improvements

Only pay for the serverpower that you need for your business, and scale up as your data needs grow

Powerful Analytics

Centralized management interface allows birds-eye view of your data infrastructure, and the agility to optimize quickly.

Streamlined CI/CD

Built-in staging and development platforms allow you to test and release new services and updates without affecting other systems.

Continuous Compliance

Keep your systems constantly updated with the latest security to keep up with HIPAA, CIS and PCI compliance

Jira Service Desk

Streamline your IT service delivery through ITIL-certified practices.

Our Partner Ecosystem

Includes services such as

If you deal with sensitive customer information, CloudCheckr integration assures continuous regulatory compliance.

When can we get started?

Ibexlabs is an authorized partner for conducting an AWS Well Architected Review which gives a set of best practices for operating infrastructure in AWS. There are three steps as part of MSP intake process:

Review

We begin by conducting a top-to-bottom review of your current data infrastructure. We note where there are resource bottlenecks, security concerns, and places to improve. We go over every aspect of our review with you, and present next steps, so everyone is on the same page.

Remediation

After we've received your approval, we will do the work of transitioning your current data infrastructure to an AWS Well-Architected one. We do this work quickly and efficiently, so that your end-point customers experience little to no downtime.

MSP

It is our goal to leave you with a system built around your particular needs, but that doesn't mean you'll be left to your own devices. Our 24/7 MSP services assure that your system is constantly running at its best.

After this transition, our MSP services are there to make sure your infrastructure is always running at its best. Once the remediation plan is implemented, you may be eligible to receive \$5000 of AWS service credits.
